HORIBA STEC, Co., Ltd.

Based on technologies developed in fields at the cutting edge, we offer various models that meet customer needs

Gases are used for various purposes in wide industries: ranging from the research and manufacture of solar panels and fuel cells, the subjects of much attention as new sources of energy, to the research and manufacture of semiconductors, liquid crystal panels, and LEDs in the electronics industry. In this way gases support the development of society.

HORIBASTEC leads the world in the development of advanced mass flow technology. Our products offer reliable, state of the art solutions for the semiconductor manufacturing and related industries.

Digital Mass Flow Controller

SEC-N100

HORIBA STEC offers a full lineup to meet your requirements.

Select transmission mode	Select power supply	Models
Digital communication ▶RS485 F-NET Protocol **Analog communication** ▶0～5VDC	**±15VDC** HORIBA STEC'S lineup includes power supply PE series.	**SEC-N102** series 
DeviceNet communication	**Conforming to ODVA standards**	**SEC-N104** series 
PROFIBUS communication **Analog communication** ▶0 to 5VDC, 0 to 10VDC 4 to 20mA	**24VDC(13 to 32VDC)**	**SEC-N106** series 

Model range covers flows up to 200slm (N_2 equivalent)

Flow rate range is controlled from 2% of full-scale flow rate.

model	flow rate range (full-scale) 10SCCM – 10SLM	20SLM – 50SLM	100SLM	200SLM
SEC-N102 series	SEC-N112	SEC-N122	SEC-N132	SEC-N142
SEC-N104 series	SEC-N114	SEC-N124	SEC-N134	SEC-N144
SEC-N106 series	SEC-N116	SEC-N126	SEC-N136	SEC-N146

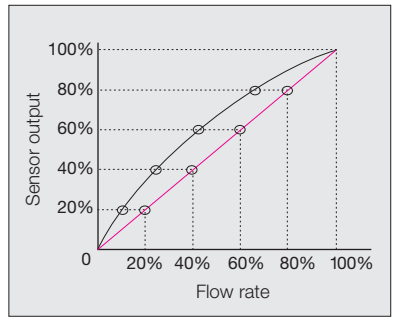
【High accuracy】

High S.P. accuracy

MFC' s linearity is compensated by polynomial approximated curve. This achieves high accuracy for all flow control ranges. For the purpose of advancement of actual gas accuracy, the calibration data of various process gases are measured by HORIBA STEC standard gas measurement system.

Accuracy	±1.0% S.P.	: 30–100% F.S.
	±0.3% F.S.	: ≤30% F.S.

(SEC-N110/N120)

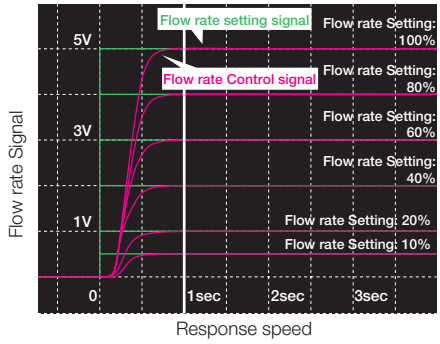


$$y=ax^5+bx^4+cx^3+dx^2+ex+f$$

【High-speed response throughout the flow rate range】

New variable PID algorithm: 1 second high-speed response

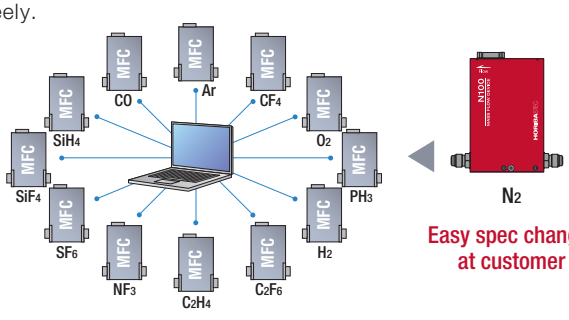
SEC-N100 series is installed with the latest "Variable PID system", which can achieve 1 second response to all setting points. Variable PID is continuously changing depending on setting flow points, this allows the PID factor to be optimized when you change full scale flow and gas.



【Multi-gas, multi-range solution】

Exclusive software allows the user to alter specification easily

The latest multi-gas, multi-range system has made it possible for the user to change the type of gas or full-scale flow rate freely.



Exclusive software, Configuration software

SEC-N100 series offers multi-gas, multi-range functionality, thanks to its configuration software. This software makes it possible to select MR/MG numbers simply by entering the type of gas being used and the flow rate range, and also features a handy N_2 gas conversion feature for flow rate measurements using N_2 gas during receipt inspections. To ensure that the software is used without error, HORIBA STEC offers software operation seminars, please contact your HORIBA STEC representative.

Suitable for multiple type of gas

Freely change type of gas

Example : SEC-N100 MR•MG-02 — N_2 100 SCCM ▶ Ar 110 SCCM

Suitable of multiple ranges

Freely change the full-scale flow rate control range.

Example : SEC-N100 MR•MG-04 — N_2 1000 SCCM (Flow rate control range 20～1000 SCCM) ▶ N_2 250 SCCM (Flow rate control range 5～250 SCCM)

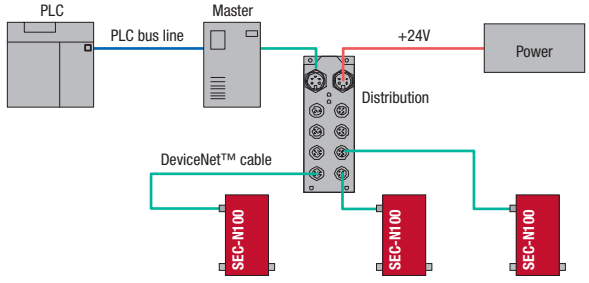
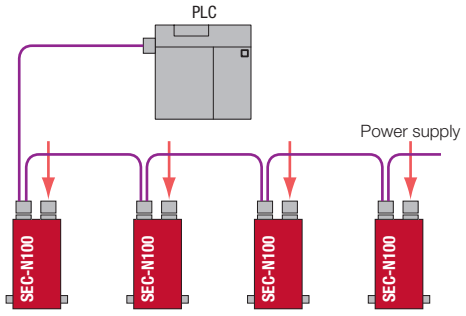
DeviceNet™communication



DeviceNet™communication

DeviceNet™ is an open and global field network that was developed by the ODVA (Open DeviceNet™ Vendor Association, Inc.) as a unique means for supporting standardization worldwide. The ODVA offers EDS (Electronic Data Sheet) specifications, which are designed to allow shared operability and programming on a multi-vendor environment. The ODVA also carries out conformance testing. Device that have passed the ODVA's conformance testing can display the DeviceNet logo.

PROFIBUS communication



PROFIBUS communication

PROFIBUS is an open field bus that is certified IEC61158. It is composed of PROFIBUS-DP for factory automation and PROFIBUS PA for process automation. PROFIBUS Organization supports standardization worldwide.

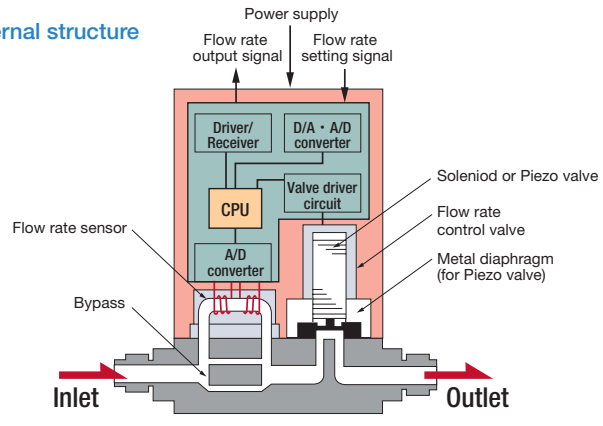
▶Structure and operating principles

The general structure of the SEC-N100 series of mass flow controller is shown in the diagram to the right. These mass flow controllers have flow rate measurement section that includes a sensor, bypass, flow rate control valve, and special circuitry. A CPU is part of the circuitry, which makes it both multi-functional and highly efficient.

The gas is input from an inlet joint, and is divided so that it flows over both the flow rate sensor and a bypass. The sensor measures the mass flow rate of the gas, and the flow rate control valve modifies the flow rate so that the difference between the measured flow rate and the flow rate received from the external flow rate setting signal is 0 (zero).

The units feature a loop circuit, so even if there is a secondary pressure change or ambient temperature change that could affect the supply pressure of the introduced gas, the flow rate is instantaneously corrected, which ensures stable flow rate control.

Internal structure



Multifunctional controller

PE-S7

The PE-S7, which comes with a program setting function, a preset function, and an integration function, is a RoHS-compliant multifunctional controller. Its front control panel offers improved ease of use.

■Specifications

●Multi-range solution ● flow rate setting function/6 presets ● program control function ● flow rate display ● integration flow rate alarm function, external output: open connector ● soft-start function, soft-start: ≤6 second, slow-start: ≤1200 second ● flow rate output signal: 0 to 5VDC external control function, flow rate setting signal input, flow rate control valve signal input: fully open/ fully closed ● power supply input: AC100V to 240V, 50/60Hz 30VA MAX ● dimensions: 48(W)x192(H)x190(D) mm (except projection portion) ● conforming to CE marking, EMC, FCC, and PSE. RoHS compliant ● conforming to digital/ analog transmission model

Dedicated power supply

PE series

The PE series provides a power supply to drive mass flow controllers/meters and auto pressure regulator with a reference voltage of 5 VDC for analog control. A model supporting current control (4–20mA), a model with a flow rate alarm output, and a model that can drive more than one unit (4 or 6units) are also available. All the models comply with the CE marking safety standard, the EMC Directive, the FCC, the Electrical Appliance and Material Safety Act, and the RoHS Directive so as to protect the environment.

▶Standard model PE-20 series

Conforming to digital/analog transmission

Power supply input:AC100~240V 50/60Hz
1 unit drive PE-21 (30VA MAX)
4 units drive PE-24 (90VA MAX)
9 units drive PE-26 (140VA MAX)

▶Alarm model PE-30A series

- It is impossible to set two-volume flow rate alarm into each power equipment.
  Alarm setting is held by volume of the main unit carrying.
- Digital/analog solutions

Power source: AC100~ 340V 50/60Hz

1 unit driving	PE-31A (30VA MAX)
4 units driving	PE-34A (90VA MAX)
6 units driving	PE-36A (140VA MAX)

▶Current control model PE-30S series

- Current control: 4 to 20 mA. Analog signal enable to long-distance control.
- It is impossible to set two-volume flow rate alarm into each power equipment.
  Alarm setting is held by volume of the main unit carrying.
- Digital/analog solutions

Power source: AC100~ 340V 50/60Hz

1 unit driving	PE-31 S (30 VA MAX)
4 units driving	PE-34 S (90VA MAX)

We perform a change of components used and production technique for production improvement at any time.
